

Test Case Report

Offer Name: test
Tested URL: https://blowoutcartdirect.com/tupperwareheritagecollection/?affid=1&state=AL&click_id=test123456789
Test Date: 2026-03-28 01:50:35
Tested By: Automated Order Flow Runner
Overall Result: PASS
Report ID: ofr_20260327_211836_73599067

Credentials

Browser: chrome
Execution Type: Order Flow Automation
Total Rows: 1

Product Map

Primary Offer: test
Landing URL: https://blowoutcartdirect.com/tupperwareheritagecollection/?affid=1&state=AL&click_id=test123456789
Report Artifact: HTML

Client Requirements

Checkout should load correctly, card information should be entered successfully, and each row should record the final order outcome.
Required output fields retained in this report: Order ID, Result, Status, Card Type, Card Last 4, and Notes.

Desktop and Mobile

This report captures automated checkout execution results. Mobile-specific layout validation is not part of this order-flow run unless separately configured.

Usability

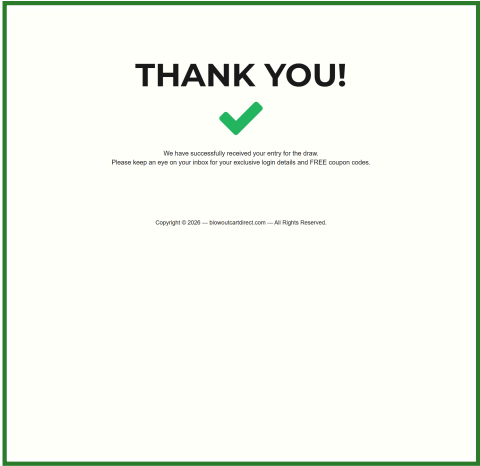

Checkout readiness, popup interruption handling, and form completion behavior were evaluated during the automated run.

Tested Rows

Row	Email	Order ID	Result	Status	Card Type	Card Last 4	Notes
1	pritam.bhar+000020000@codeclouds.com	6237439	PASS	PLACED	VISA	4442	Order placed successfully.

Execution Details

Order no. 1
Email: pritam.bhar+000020000@codeclouds.com
Order ID: 6237439
Result: PASS
Status: PLACED
Browser: chrome
Card Type: VISA
Card Last 4: 4442
Expectation: prepaid
Notes: Order placed successfully.
Screenshot:

Console Issue Verification

1. 404 Issues in JS Console

Verify no 404 errors appear while loading the checkout flow or clicking View/Download actions.

Desktop - Status: MANUAL Screenshot should show the dev tools console open; use a green border for pass and red for fail.

Screenshot (Console Open): Pending capture.

Mobile - Status: MANUAL Screenshot should show the dev tools console open; use a green border for pass and red for fail.

Screenshot (Console Open): Pending capture.

2. JavaScript Uncaught Exceptions

Watch for any uncaught errors in the console during desktop/mobile interactions and log their stack traces.

Desktop - Status: MANUAL Screenshot should show the dev tools console open; use a green border for pass and red for fail.

Screenshot (Console Open): Pending capture.

Mobile - Status: MANUAL Screenshot should show the dev tools console open; use a green border for pass and red for fail.

Screenshot (Console Open): Pending capture.

3. Verify Ajax Does Not Trigger Multiple Times

Trigger submit/up-sell actions while spamming Enter/Space and ensure the Fetch/XHR pane only shows a single request per action.

Desktop - Status: MANUAL Screenshot should show the dev tools console open; use a green border for pass and red for fail.

Screenshot (Console Open): Pending capture.

Mobile - Status: MANUAL Screenshot should show the dev tools console open; use a green border for pass and red for fail.

Screenshot (Console Open): Pending capture.

Security and Performance

Summary: Total Rows: 1 | Placed Orders: 1 | Failed Orders: 0

Learn more about cookies. ALPN extension is supported. HTTP/2 Test FAQ What is HTTP/2? HTTP/2 is the first major HTTP protocol update since 1997 when HTTP 1.1 was first published by the IETF. The new HTTP protocol is needed to keep up with the exponential growth of the web. The success of HTTP/1.3 brings significant improvement in efficiency, speed and security and is supported by most modern web browsers. A list of browsers that support HTTP/2 can be found on caniuse.com. • HTTP/2 is binary, instead of textual. • It is fully multiplexed, sending multiple requests in parallel over a single TCP connection. • It uses header compression HPACK to reduce overhead. • It allows servers to "push" responses proactively into client caches instead of waiting for a new request for each resource. • It uses the new ALPN extension which allows for faster-encrypted connections since the application protocol is determined during the initial connection. • It reduces additional round trip times (RTT) making your website load faster without any configuration. • Domain sharding and asset concatenation is no longer needed with HTTP/2. HTTP/2 introduces other improvements, more details: HTTP/2 RFC7540 This test can check HTTP and HTTPS but most browsers only support HTTP/2 for HTTPS, which means you must migrate to HTTPS if you want to take advantage of the performance benefits. Does this test also verify SPDY? Not directly, but it tests which TLS extension is supported to negotiate the protocols. The tested TLS extensions are either NPN or ALPN. Next Protocol Negotiation (NPN) appeared as part of the SPDY protocol but it has been deprecated. Application Layer Protocol Negotiation (ALPN) is the successor of NPN and is approved by the IETF (RFC7301). However, NPN advertises the supported protocols from the server to the client and this test will show the advertised protocols if HTTP/2 is not supported. The protocol advertising has been moved to ALPN (client to server). The first phase of this HTTP/2 check runs the ALPN test with only H2 in the protocol list. How to test HTTP/2 via command line? Get the latest curl release and use this command: <code>curl -I --http2</code> keycdn KeyCDN is a content delivery network that will supercharge your web assets.
