Report Artifact: HTML

Client Requirements

Checkout should load correctly, card information should be entered successfully, and each row should record the final order outcome.
Required output fields retained in this report: Order ID, Result, Status, Card Type, Card Last 4, and Notes.

Desktop and Mobile

This report captures automated checkout execution results. Mobile-specific layout validation is not part of this order-flow run unless separately configured.

Usability

Checkout readiness, popup interruption handling, and form completion behavior were evaluated during the automated run.

Tested Rows

HTTP/2 Test FAQ

What is HTTP/2?

HTTP/2 is the first major HTTP protocol update since 1997 when HTTP/1.1 was first published by the IETF. The new HTTP protocol is needed to keep up with the exponential growth of the web. The successor of HTTP/1.1 brings significant improvement in efficiency, speed and security and is supported by most modern web browsers. A lot of browsers that support HTTP/2 can be found on canisius.com.

Does this test also verify SPDY?

Not directly, but it tests which TLS extension is supported to negotiate the protocols. The tested TLS extensions are either SPDY or ALPN. Next Protocol Negotiation (NPN) appeared as part of the SPDY protocol but it has been deprecated. Application Layer Protocol Negotiation (ALPN) is the successor of NPN and is approved by the IETF RFC7540. However, NPN advertise the supported protocols from the server to the client and the test will show the advertised protocols if HTTP/2 is not supported. The protocol advertising has been removed in ALPN (client to server). The first phase of the HTTP/2 check runs the ALPN test with only h2 in the protocol list.

How to test HTTP/2 via command line?

Get the latest curl release and use this command: curl --http2 .

SCREEN SHORT

A screenshot of a 500 Internal Server Error page from the website www.gutenberg.org. The page has a clean, white background with black text. At the top, it says "Access denied" in a small font, followed by "Error 15" in a larger, bold font. Below that is the website URL "www.gutenberg.org" and a timestamp "2020-04-07 18:03:47 UTC". A section titled "What happened?" contains the message "This request was blocked by our security service". Below this, technical details are listed: "Your IP: 103.183.79.232", "Proxy IP: 45.01.102.249 (2: 60.60.9.63)", and "request ID: 34433262727000707070 40:00000000000000000000000000000000". At the bottom right, it says "Powered by: imgproxy".
