

Test Case Report

Offer Name: test
Tested URL: <https://www.bestvaultbargaindash.com/ninjawoodfireoutdoorgrill/?affid=1&state=CA>
Test Date: 2026-05-09 02:32:32
Tested By: Automated Order Flow Runner
Overall Result: **PASS**
Report ID: ofr_20260508_230033_0a06becb

Credentials

Browser: msedge
Execution Type: Order Flow Automation
Total Rows: 1

Product Map

Primary Offer: test
Landing URL: <https://www.bestvaultbargaindash.com/ninjawoodfireoutdoorgrill/?affid=1&state=CA>
Report Artifact: HTML

Client Requirements

Checkout should load correctly, card information should be entered successfully, and each row should record the final order outcome.
Required output fields retained in this report: Order ID, Result, Status, Card Type, Card Last 4, and Notes.

Desktop and Mobile

This report captures automated checkout execution results. Mobile-specific layout validation is not part of this order-flow run unless separately configured.

Usability

Checkout readiness, popup interruption handling, and form completion behavior were evaluated during the automated run.

Tested Rows

Row	Email	Order ID	Result	Status	Card Type	Card Last 4	Notes
1	pritam.bhar+000020000@codeclouds.com	7008819	PASS	PLACED	VISA	4442	Order placed successfully.

Execution Details

Order no. 1

Email: pritam.bhar+000020000@codeclouds.com

Order ID: 7008819

Result: PASS

Status: PLACED

Browser: msedge

Card Type: VISA

Card Last 4: 4442

Expectation: prepaid

Notes: Order placed successfully.

[KeyCDN HTTP2 Test](#)

SCREEN SHORT

The screenshot shows the KeyCDN website's 'Tools' section. The 'HTTP/2 Test' tool is selected, which is used to verify HTTP/2 support. The interface includes a sidebar with navigation links for various tools, a main content area with the test results, and a footer with company information and links.

ALPN extension is supported.

HTTP/2 Test FAQ

What is HTTP/2?
HTTP/2 is the first major HTTP protocol update since 1997 when HTTP/1.1 was first published by the IETF. The new HTTP protocol is needed to keep up with the exponential growth of the web. The successor of HTTP/1.1 brings significant improvement in efficiency, speed and security and is supported by most modern web browsers. A list of [browsers that support HTTP/2](#) can be found on caniuse.com.

- HTTP/2 is binary, instead of textual.
- It is fully multiplexed, sending multiple requests in parallel over a single TCP connection.
- It uses header compression HPACK to reduce overhead.
- It allows servers to "push" responses proactively into client caches instead of waiting for a new request for each resource
- It uses the new **ALPN** extension which allows for faster-encrypted connections since the application protocol is determined during the initial connection.
- It reduces additional round trip times (RTT), making your website load faster without any optimization.
- Domain sharding and asset concatenation is no longer needed with HTTP/2.

HTTP/2 introduces other improvements, more details: [HTTP/2 RFC7540](#)

This test can check HTTP and HTTPS but most browsers only support HTTP/2 for HTTPS, which means you must migrate to HTTPS if you want to take advantage of the performance benefits.

Does this test also verify SPDY?
Not directly, but it tests which TLS extension is supported to negotiate the protocols. The tested TLS extensions are either **NPN** or **ALPN**. Next Protocol Negotiation (NPN) appeared as part of the SPDY protocol but it has been deprecated. Application Layer Protocol Negotiation (ALPN) is the successor of NPN and is approved by the IETF ([RFC7301](#)). However, NPN advertises the supported protocols from the server to the client and this test will show the advertised protocols if HTTP/2 is not supported. The protocol advertising has been reversed in ALPN (client to server). The first phase of this HTTP/2 check runs the ALPN test with only H2 in the protocol list.

How to test HTTP/2 via command line?
Get the latest [curl](#) release and use this command:
`curl ->http2`
